Bugs & suggestions (<https://github.com/benilovj/dbfit/issues>) Version 2.0.0-RC4

The complete solution

Write, manage and execute tests directly from the browser.

Free and open source

Released under the GPL license, source available on GitHub (<https://github.com/benilovj/dbfit>).

Built with FitNesse

DbFit is written on top of FitNesse (<http://fitnesse.org/>), a mature, fully-featured framework with a large community.

Supports all major DBs

Out-of-the-box support for Oracle, SQL Server, MySQL, DB2, PostgreSQL, HSQLDB and Derby.

Readable tests

DbFit tests are written using tables, making them more readable than xUnit-style tests.

Automatable

Run tests from the commandline, any Java IDE or CI build tool.
